

# FOODSCRAPS to FERTILISER WORKSHOP!

## Twin Bin Composting

if you have a backyard!

## Wormfarming

if you have a patio or balcony or you just want that extra scrummy plant food. *Red compost worms turn lots of fruit & vegie scraps into highly concentrated goodness for plants!*

## Bokashi

if you have a small garden to bury the scraps in, after fermenting with special microbes. Works well for those away from home a lot or who have a wormfarm but want to deal with meaty, fishy, starchy scraps. Tomatoes, fruit trees, most plants love bokashi!

See our instruction sheets: [greenservices.com.au](http://greenservices.com.au)

A method for every household!
